One more thing before I forget: Adobe has given us a free Lightroom subscription for 30 days. As this is a brand new product we're reviewing, we decided to try it out and see what benefits come with an early-access trial. As you know, your membership renews automatically at the end of the trial period, and you'll receive a 30-day free trial of Adobe Lightroom 5 for the entire Creative Cloud platform. That means you can freely preview, import, and export your images without any additional costs through the end of the month. PS CS6 Lightroom is a worthy software update. It's worth upgrading to for most users. It adds a bunch of cool new features while updating your catalog if using an external drive. The update also includes other minor clarifications... But don't update just yet. If your catalog is empty, you may run into some serious trouble. Lightroom 4.3 is not compatible with other versions of Photoshop than CS5 or greater. If you have users on CS6 and lower or those that have moved to PS7, they won't be able to transfer catalogs across anymore. While this is frustrating to most people, Adobe has been known to offer free upgrade patches anyway. Usually when the update is given a platform is retired. While the CS6 version of Lightroom also adds a bunch of features, it is not as substantial as the features of CS6 Photoshop. If you want to keep using a different version of Photoshop, this version will work fine. Lightroom will now detect your new software and allow you to open your existing libraries. And the Library management is significantly improved. As I discussed earlier, my Lightroom 5 catalog is about 1.5GB. If the catalog was larger, it would be more disk space hungry.

Photoshop brushes all come with their own brush tool which you can customise. Adobe are saying that this time around, they're pushing the envelope of what Photoshop brushes currently offer. We expect more variety and likely a deep dive into the process of creating custom brushes. Of course the most powerful feature of the new Photoshop brushes is the ability to edit the style attributes of any brush. Users can set the shape of a stroke, the size of the paint bucket, the number of colours and more. You can even alter the behaviour of strokes such as their atmospheric effect. The brush shape will update itself in real time. A great example of the power of the new brush features is a follower brush. People can copy this brush and just tweak the settings. In the below screenshot, clicking & holding the mouse down will bring up a small dialog which allows you to edit the settings live. You'll see it updates itself as you edit it. New in Photoshop CC is Share for Review, which allows users to work collaboratively on projects without leaving Photoshop. This feature, powered by Adobe's Project Links, enables teams to easily review and comment on revisions made by other users. Users can also track changes made while reviewing a project and find out what other team members have been doing in Photoshop. Share for Review introduces two collaboration experiences: pull and push, and hub and dismiss, allowing for instant collaboration and feedback with transparency and accountability across projects. New in Photoshop CC brings a one-click Delete and Fill tool to quickly remove and fill objects in images with a single action, making it faster and easier to spot and correct objects in and out of images. The tool now also intelligently recommends replacement options based on substitution relationships with other objects in the image. And with advanced masking controls, it is now easier to quickly edit, resize, add, and subtract areas of a large image without altering neighboring areas.
