In September, the newest version of Photoshop will be available for download, featuring new selections, innovative new tools for image editing and new capabilities for video. Through this release, Photoshop will become significantly more powerful as it's upgraded to become a leader in a broader, more unified set of product offerings. The Adobe Sensei technology of Adobe Photoshop provides machine-learning intelligence to create powerful image editing tools that make creative work faster and easier. In its most recent beta release, Adobe is gearing up for the release of the Google Chrome for Windows desktop version for home and professional use. This release will include the incredible power of Adobe Sensei, new photo import and editing tools and a grid-based user interface that offers unparalleled flexibility, precision and speed for image creation. It is also the first version of Photoshop able to edit video, in addition to camera RAW files. "Previously, the tools to program masks and selections only existed inside of Photoshop," said Alan Messer, senior

director of Photoshop. “And those tools are extraordinarily critical to the process of image editing. We’ve redesigned the selection tools from the ground up to enable users to see exactly what they’re selecting by simply watching the sliders change, without any need to actually change the selection on the canvas. It’s a major shift forward for image editing in Photoshop.” With the addition of the new Adobe TWAIN drivers, the Creative Cloud version of Photoshop now supports 300 different camera models. The new version also features a new, browser-based workspace and tools to create flash layers (new Smart Objects) and project files, which can store all of the settings for a file, such as white balance, sharpness and color, into a file.

**Background** - the background is the theme for the post; it is a color that defines mood and adds tone to the article. It is important to choose the appropriate background to create a well-balanced and cohesive web post. A black or white background is great for posts that are informational or simple writing. A solid color background can be used for more engaging copy. While white and neutral backgrounds effectively break up text and graphics, blue and green backgrounds tend to create a more calming and relaxing aesthetic. **Bold** - bold text is used to immediately distinguish particular words or phrases from their surroundings. Consequently, bold text helps to make a text more interesting and makes it more visually appealing among other text styles. But don’t overdo it; otherwise you risk losing the visual hierarchy in your text. **Light** - what is the definition of white? Its the lightest color—it is the opposite of black. It is the right color for a white background, because it has a really bright appearance, as if it was exposed to direct sunlight. But a light background makes it difficult to read text, especially if the text is light in color. As a solution to this problem, you can lower the brightness of the text, or use other text styles like a grayscale image or a single color. But keep in mind that this method requires text to be copied to another stage before applying the change. **Eye-Catching** - Powerful but not always easy to master, the eye is one of the most important and perhaps the most critical aspects of design. It is used to distinguish the main idea of the blog post from the rest of the text. It is often used to highlight headlines or the most important text. It’s also used to identify a product or a product line, such as in social media.
